SUPAVADEE JUNYAKUL

Software Engineer for Automation Intern

Education

Phetchaburi Rajabhat University **(2023 - Present)**

- 4th-Year Student, B.Sc. in Computer Science
- Faculty of Information Technology
- GPA: 3.94 / 4.00
- Expected Graduation: April 2027

Ratchaburi Technical College **(2020 - 2023)**

- Vocational Certificate in Electronics Technology
- GPAX: 3.96 / 4.00

Honors & Activities

National Finalist & Grant Recipient | National Software Contest (NSC 2026) **2026**

- **Project:** AI-Assisted Diabetic Neuropathy Screening Application.
- Received a research and development grant and advanced to the National Finals in the Health, Disability, and Elderly Programs category.
- Co-developed AI modules (CNN, YOLOv8) for image classification and utilized the Confusion Matrix (Accuracy, Precision, Sensitivity) to evaluate sensory assessment data.

University Representative | The 46th P.J.N.K. Academic Skills Competition **2025**

- Represented the university in the Programming category at Muban Chombueng Rajabhat University.
- Solved complex coding challenges under strict time constraints.

Committee Member (Academic Dept.) | Student Club, Faculty of Information Technology **2025**

- Coordinated faculty-wide academic events, ensuring smooth execution with students and professors.

Projects

Smart Farm Environmental Monitoring & Data Logging System **2025**

- Built an automated irrigation system using ESP32 and Fuzzy Logic to optimize water usage.
- Integrated DHT22 and LDR sensors for real-time environmental data logging.

Electric Bicycle (E-Bike) Control System **2023**

- Developed a customized electronic control circuit and battery management system to convert a standard bicycle into an E-Bike.
- Integrated the DC motor with the electronic controller, performing hardware troubleshooting to achieve optimal performance and safety.

Experience

Student Web Developer (Contract) | PM 2.5 Air Quality Monitoring Project **2026**

- Co-developed a PM 2.5 monitoring web app for Phetchaburi using PHP, JavaScript, and MySQL.
- Built responsive interfaces (HTML/CSS/Bootstrap) to visualize live environmental metrics clearly.

Maintenance Intern | B.K.J Advanced Process Co., Ltd. **2023**

- Troubleshooted and repaired factory tools and internal electrical systems to minimize downtime.
- Conducted routine preventative maintenance to ensure facility safety and efficiency.

Personal Info

26 / 02 / 2005

Phetchaburi, Thailand

https://github.com/Supavadee-th

Motivated 4th-year Computer Science student with a background in Electronics Technology, skilled in C/C++ programming, IoT system development, and hardware integration. Seeking a 4-month internship in Software Engineer for Automation or IoT Developer roles. Eager to leverage my expertise in microcontrollers (ESP32) and software development **to develop control software for automated equipment and robotics** in a leading electronics manufacturing environment.

Technical Skills

Hardware & IoT: ESP32, Wokwi, Sensor Integration (DHT22, LDR), Fuzzy Logic Control, Electronic Circuit Maintenance

Programming: C/C++, PHP, JavaScript (JS), HTML/CSS

Database & System Analysis: MySQL, PostgreSQL, System Analysis, Use Case Diagram

Tools & Version Control: Git/GitHub, Tailwind, Bootstrap

Languages

- **Thai:** Native
- **English:** Pre-Intermediate (Reading & Writing)
- **Chinese:** Basic

Internship Availability

- **Period:** 9 November 2026 – 19 March 2027 (Total 600 Hours)
- **Duration:** 1 Semester (4 months)
- **Preferred Location:** Cal-Comp Electronics (Khao Yoi, Phetchaburi)
